The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnossis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, jumune gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. The invention relates to an isolated polynucleotide encoding a comparising a portion of an ovarian tumour protein. The comparise comprising a portion of an ovarian tumour protein. The comparise comparising a portion of an ovarian tumour protein. The comparise comparise comparison of an ovarian tumour protein. The comparison cancer by that expresses the sequences is useful for treating ovarian cancer by comparison that expresses the sequences is useful for treating ovarian cancer by comparison to follow the comparison of the patient to inhibit the comparison of cancer. The DNA sequences are useful as probes or primers comparison of a concer in a patient to inhibit the comparison of a concer in a patient comparison of a concer in a patient comparison of a concer in a patient composition of a concer in a patient composition of a concer in a patient comparison to a protein that binds to the ample from the patient, contacting the amount of protein that binds to the apart, comparison the amount of composition to a predetermined cut-off value and determining the presence of cancer. Sequences ABK09404-ABK09802 represent PCR primers and cDNA contacting the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                24-MAY-2000; 2000US-207107P.

            The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) Group I molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and non-small cell lung cancer, melanoma, colon, breast, head
                                                                                                                                                                                                                                                       Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encoded by an isolated nucleic acid comprising an NA Group 3 or 4 molecule -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; small cell lung cancer; therapy; hCAAP; nucleic acid; NA; melanoma; cancer; colon; breast; head; neck; transitional cancer; leimyosarcoma; helix-loop-helix; head; protein-binding factor; MPP11; synovial sarcoma; cytostatic; ds.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
                                                                                                                                                                            C albicans apoptosis associated coding sequence #48

```
The present invention provides the protein and coding sequences of a number of apoptosis associated proteins from the yeast Saccharomyces cerevisiae and the fungus Candida albicans. These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the C. albicans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Yeast and fungal nucleic acids encoding proteins involved in a pathway leading to programmed cell death, useful for treating proliferative disorders, yeast and fungal infections, or for preventing apoptosis in certain diseases -

These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the S. cerevisiae
                                                                                                                                                                                                                                        CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the yeast zuotin gene. Fragments of the encoded CC protein can be used as the amphiphilic peptides used in the macroscopic CC membrane (AM) of the invention. The MM is formed by self-assembly of the containing monovalent metal cations. The MM are stable in serum, are CC containing monovalent metal cations. The MM are stable in serum, are CC medical products (e.g. sutures), or internal linings. The MM are useful cas slow-diffusion drug delivery vehicles for protein-type drugs, CC including erythropoletin, tissue-type plasminogen activator, synthetic chaemoglobin and insulin. They can be used in applications, such as CC separation matrices (e.g. dialysis membranes). Collagen may be combined CC with the peptides to produce membranes for use as artificial skin. The MM CC may be useful for treating Alzheimer's disease or scrapie infection. As CC they are resistant to proteolytic digestion and alkaline and acidic pH CC (such as stomach acid), drug delivery vehicles made of the MM could be CC call adhesion and migration. The permeability of the MM also permits CC diffusion of small molecules, to the underside of cell monolayers, useful cor lawers.

Homo sapiens.

```
This sequence encodes the human zuotin (ZUO1) protein. Fragments of the CC protein can be used in the in vitro method of the invention. The method ci is for culturing cells utilising stable macroscopic membranes formed by CC the self-assembly of amphiphilic peptides. The peptides are salt-induced CC to form insoluble and protease-resistant protein filaments with a CC wide variety of medical, research, industrial and biomaterial cc wide variety of medical, research, industrial and biomaterial cc wide variety of medical, research, industrial and biomaterial cc witro cell attachment and growth and for supporting artificial tissue (e.g. for in vivo use as implants). They are particularly useful as cc experimental models for Alzheimer's disease and scrapic infection and so camp be used in disease modelling experiments and to assay for agents cc which modulate the disease processes. Additionally, they may be used in this way to study liver cirrbosis, kidney amyloidosis and other protein conformational diseases. The membrane in the membrane/cell mixture c produced in the method: (i) supports cellular attachment and growth; cl is self-assembles to form large, macroscopic membranes that are c highly resistant to heat, alkaline/acidic pHs, chemical denaturants and consible to the naked eye if dyed but is otherwise transparent; (vi) may cr orraduced and stable in according to the resistant to the structures, high tensile strength and a porous structure; with continuous scructure; high tensile strength and approase structures with the produced and the province and the province to the produced by humans and animals; (viii) is inexpensive to produced.
                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signaling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 1411; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-656860/75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23-MAR-2000; 2000US-191637P

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB7373-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 1417; 21pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAX61811 standard; DNA; 1125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polypeptides can be used in vaccines for elicting protective antibodies to members of the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also infection caused by a member of the Borrelia genus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        30-DEC-1998

                                                                                                                                                                                                                                                                                                                                            AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and spirochetes are pathogenic in humans and Borrelia causes epidemic and
